

NATURA 2000

STANDARD DATA FORM

FOR SPECIAL PROTECTION AREAS (SPA)

FOR SITES ELIGIBLE FOR IDENTIFICATION AS SITES OF
COMMUNITY IMPORTANCE (SCI)

AND

FOR SPECIAL AREAS OF CONSERVATION (SAC)

1. SITE IDENTIFICATION

1.1. TYPE

B

1.2. SITE CODE

NL2008002

1.3. COMPILATION DATE

200812

1.4. UPDATE

1.5. RELATION WITH OTHER NATURA 2000 SITES:

1.6. RESPONDENT(S):

Directie Kennis LNV
Postbus 482
NL-6710 BL Ede
The Netherlands

1.7. SITE NAME:

Klaverbank

1.8. SITE INDICATION AND DESIGNATION/CLASSIFICATION DATES:

DATE SITE PROPOSED AS ELIGIBLE AS SCI:

DATE CONFIRMED AS SCI:

200812

DATE SITE CLASSIFIED AS SPA:

DATE SITE DESIGNATED AS SAC:

2. SITE LOCATION

2.1. SITE CENTRE LOCATION

LONGITUDE

E 3 5 7

W/E (Greenwich)

LATITUDE

54 1 21

2.2. AREA (HA):

123733,00

2.3. SITE LENGTH (KM):

2.4. ALTITUDE (M):

MINIMUM

-71

MAXIMUM

-30

MEAN

-43

Marine area not covered by a NUTS-region 100

2.6. BIOGEOGRAPHIC REGION:

Alpine

Atlantic

Boreal

Continental

Macaronesian

Mediterranean

3. ECOLOGICAL INFORMATION

3.1. HABITAT types present on the site and assessment for them:

ANNEX I HABITAT TYPES:

CODE	%COVER	REPRESENTATIVITY	RELATIVE SURFACE	CONSERVATION STATUS	GLOBAL ASSESSMENT
1170	50	B	A	C	A

3.2. SPECIES

covered by Article 4 of Directive 79/409/EEC

and

listed in Annex II of Directive 92/43/EEC

and

site assessment for them

3.2.a. BIRDS listed on Annex I of Council directive 79/409/EEC**3.2.b. Regularly occurring Migratory Birds not listed on Annex I of Council Directive 79/409/EEC****3.2.c. MAMMALS listed on Annex II of Council directive 92/43/EEC**

CODE	NAME	POPULATION			SITE ASSESSMENT		
		Resident	Migratory	Population	Conservation	Isolation	Global
			Breed		Winter	Stage	
1351	Phocoena phocoena	C		B	B	C	B
1364	Halichoerus grypus	C		C	B	C	C
1365	Phoca vitulina	R		C	B	C	C

3.2.d. AMPHIBIANS and REPTILES listed on Annex II of Council directive 92/43/EEC**3.2.e. FISHES listed on Annex II of Council directive 92/43/EEC****3.2.f. INVERTEBRATES listed on Annex II of Council directive 92/43/EEC****3.2.g. PLANTS listed on Annex II of Council directive 92/43/EEC**

3.3. Other Important Species of Flora and Fauna

(B = Birds, M = Mammals, A = Amphibians, R = Reptiles, F = Fish, I = Invertebrates, P = Plants)

4. SITE DESCRIPTION

4.1. GENERAL SITE CHARACTER:

Habitat classes	% cover
Marine areas, Sea inlets	100
Total habitat cover	100 %

Other site characteristics

The Klaverbank is the only site on the Dutch Continental Shelf that has significant quantities of gravel lying on the surface and on which larger stones with a specific covering of calcareous algae occur. It is the site with the greatest diversity of bottom fauna on the Dutch Continental Shelf. The Klaverbank is split into two parts from the north-west to the south-east by a 60 metre deep channel called the Botney Cut. There are also large gravel and stone concentrations on the UK Continental Shelf. The area came into being as the end moraine of a glacier from the last Ice Age (Weichselian) (Lindeboom et al., 2005).

4.2. QUALITY AND IMPORTANCE:

The area is also potentially important for breeding fish such as rays and herring which need hard substrates. There are indications that this has been the case in the past; the present situation is not known, however. There are also indications that birds and harbour porpoise sometimes occur in larger concentrations in this area; however, it is not known whether this is structural (Lindeboom et al., 2005).

All the ecological values in the area with coarse gravel are of significance, particularly surface stones and their specific vegetation. The benthos living between them also have a high ecological value with specific long-lived species which are unique to the Netherlands (Lindeboom et al., 2005). There is a biotic community present on the Klaverbank, which, as far as we know, is not found in other parts of the Dutch Continental Shelf (Van Moorsel, 2003).

Characteristic fish species on the Klaverbank include: anchovy (*Engraulis encrasiculus*), spotted ray (*Raja montagui*), cod (*Gadus morhua*), lesser weever (*Echiichthys vipera*), scaldfish (*Arnoglossus laterna*). Benthos species typical of the Klaverbank with densities of approximately 1 to 100 individuals per square metre are *Harpinia antennaria*, *Hippomedon denticulatus*, *Urothoe elegans*, *Dosinia lupinus*, *Mactra corallinae*, *Phaxas pellucidus*, *Glycera lapidum*, *Glycera rouxi*, *Lumbrineris latreilli*, *Pectinaria koreni*, *Poecilochaetus serpens* and *Synelmis klatti*.

4.3. VULNERABILITY

4.4. SITE DESIGNATION:

The same designation as under OSPAR under consideration.

4.5. OWNERSHIP

no ownership: Mare Liberum; part of the EEZ
